

CLAIMS

What is claimed is:

1. A method for evaluating a test action for a user, the method comprising  
  
creating, within a network, a user metric vector in dependence upon a plurality  
5 of disparate user metrics;  
  
selecting a test action in dependence upon the user metric vector;  
  
executing the test action within the network; and  
10 determining a user reaction.
2. The method of claim 1 wherein selecting a test action in dependence upon the user metric vector comprises retrieving an action ID from a test action list.
3. The method of claim 1 wherein selecting a test action in dependence upon the user metric vector comprises selecting an action ID in dependence upon devices in the domain.
4. The method of claim 1 comprising adding the test action to a user's action list in dependence upon the user reaction.

5. The method of claim 1 comprising deleting the test action from an test action list in dependence upon the user reaction.
6. The method of claim 1 wherein determining a user reaction comprises receiving a user instruction.
7. The method of claim 1 wherein determining a user reaction comprises inferring a user reaction.

8. A system for evaluating a test action for a user, the system comprising
- means for creating, within a network, a user metric vector in dependence upon a plurality of disparate user metrics;
- 5 means for selecting a test action in dependence upon the user metric vector;
- means for executing the test action within the network; and
- 10 means for determining a user reaction.
9. The system of claim 1 wherein means for selecting a test action in dependence upon the user metric vector comprises means for retrieving an action ID from a test action list.
10. The system of claim 1 wherein means for selecting a test action in dependence upon the user metric vector comprises means for selecting an action ID in dependence upon devices in the domain.
11. The system of claim 1 comprising means for adding the test action to a user's action list in dependence upon the user reaction.
12. The system of claim 1 comprising means for deleting the test action from an test action list in dependence upon the user reaction.
13. The system of claim 1 wherein means for determining a user reaction

comprises means for receiving a user instruction.

14. The system of claim 1 wherein means for determining a user reaction comprises means for inferring a user reaction.

15. A computer program product for evaluating a test action for a user, the computer program product comprising
- a recording medium;
- 5 means, recorded on the recording medium, for creating, within a network, a user metric vector in dependence upon a plurality of disparate user metrics;
- means, recorded on the recording medium, for selecting a test action in
- 10 dependence upon the user metric vector;
- means, recorded on the recording medium, for executing the test action within the network; and
- 15 means, recorded on the recording medium, for determining a user reaction.
16. The computer program product of claim 1 wherein means, recorded on the recording medium, for selecting a test action in dependence upon the user metric vector comprises means, recorded on the recording medium, for retrieving an action ID from a test action list.
- 5
17. The computer program product of claim 1 wherein means, recorded on the recording medium, for selecting a test action in dependence upon the user metric vector comprises means, recorded on the recording medium, for selecting an action ID in dependence upon devices in the domain.
- 5

18. The computer program product of claim 1 comprising means, recorded on the recording medium, for adding the test action to a user's action list in dependence upon the user reaction.
19. The computer program product of claim 1 wherein means, recorded on the recording medium, for determining a user reaction comprises means, recorded on the recording medium, for receiving a user instruction.
20. The computer program product of claim 1 wherein means, recorded on the recording medium, for determining a user reaction comprises means, recorded on the recording medium, for inferring a user reaction.
